## What About Mosquitos?

**Get on Jackson County Vector Control District No-Spray List:**  
**[jevcd.org/no-spray/](http://jevcd.org/no-spray/)**

### DeltaGard label

<https://www.backedbybayer.com/~media/BackedByBayer/Product%20Labels%20-%20pdf/DeltaGard.ashx>

ACTIVE INGREDIENT:

**Deltamethrin** ..... 2.0% OTHER

INGREDIENTS :..... 98.0% TOTAL : 100.0%

ENVIRONMENTAL HAZARDS This product is **extremely toxic to fresh water and estuarine fish and invertebrates**. Runoff from treated areas into a body of water may be hazardous to fish and aquatic invertebrates. Do not apply over bodies of water (lakes, rivers, permanent streams, natural ponds, commercial fish ponds, swamps, marshes, or estuaries), except when necessary to target areas where adult mosquitoes are present, and weather conditions will facilitate movement of applied material away from the water in order to minimize incidental deposition into the water body. Do not contaminate water when disposing of equipment rinsate or wash waters. When used for mosquito adulticiding; This pesticide is highly toxic to bees exposed to direct treatment on blooming crops or weeds. Do not apply this product or allow drift when bees are foraging the treatment area, except when applications are made to prevent or control a threat to public and / or animal health determined by a state, tribal or local health or vector control agency on the basis of documented evidence of disease causing agents in vector mosquitoes, or the occurrence of mosquito-borne disease in animal or human populations, or if specifically approved by the state or tribe during a natural disaster recovery effort. When applied outdoors for fly control; **This pesticide is highly toxic to bees exposed to direct treatment on blooming crops or weeds. Do not apply this product or allow drift when bees are foraging the treatment area.**

### Oregon Department of Fish and Wildlife

[http://www.dfw.state.or.us/fish/water/vector\\_control\\_guidance.asp](http://www.dfw.state.or.us/fish/water/vector_control_guidance.asp)

"Adulticides: Since adulticiding is not highly selective and non-target species can be adversely affected, ODFW is concerned about potential short and long term impacts from adulticiding to fish, wildlife, and habitats in sensitive areas. Control methods that minimize the occurrence of adults, such as increasing predator diversity or larviciding with more target-specific products, are preferable."
